

RectipHy

Water Conditioner + Surfactant

Get the most out of each pass – add RectipHy™ to your tank.

RectipHy is a water conditioner that is formulated to maximize the efficacy of both your pesticides and foliar fertilizers.

- Improves herbicide efficiency along with promoting weed control.
- Flexible use rate from 0.25 to 1 quart per 25 gallons (6.4–25.6 oz gallon) of water based on water quality.
- Compatible with most herbicides as well as a wide range of ATP's innovative plant nutrition products.
- Contains a novel surfactant.

Water Conditioning = Delivers the Genetic Potential

Whether it's a preseed burndown, in-crop or pre-harvest, attention should be paid to spray water quality because hard water (cations) can bind to pesticides – decreasing efficacy. By softening the spray water in the tank, RectipHy helps ensure that growers get the most out of each pass over the field.

- Adding RectipHy to your tank mix can maximize chemistry efficacy by balancing your pH and softening hard water.
- RectipHy's surfactant package ensures that more herbicide gets into the leaf reducing the effect of these plant-borne cations.
- RectipHy neutralizes the free ions present in hard water, preventing pesticides from reacting with hard water cations like magnesium, iron and calcium.
- At harvest, RectipHy helps glyphosate penetrate dusty or dirt-covered weeds.

Increase Pre-Harvest Efficiency

Glyphosate alone (left) vs Glyphosate and RectipHy (right)

RectipHy Addresses Hard Water

21 DAT (Michigan State University) 475 ppm hard water

Importance of Soft Water

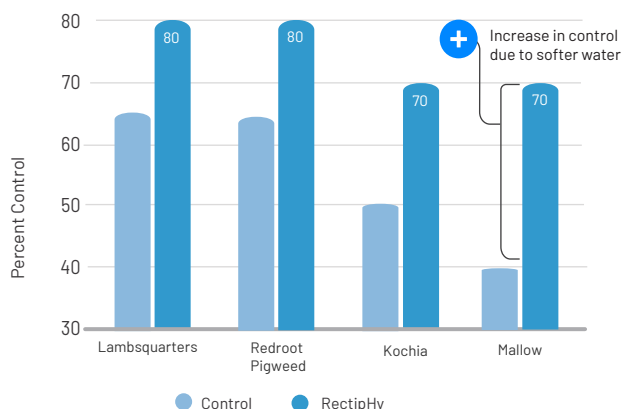

Glyphosate and distilled water (left) vs. Glyphosate only (Ca + Mg at 1000 ppm)

Proven Agronomic Performance

- When RectipHy and Glyphosate are combined, tough to kill weeds like Lambsquarters and Redroot Pigweed are more effectively controlled, maintaining the yield potential of the crop.
- Increased weed control occurs due to RectipHy neutralizing the free ions present in hard water. It prevents your pesticides from reacting with hard water cations like magnesium, iron and calcium. RectipHy's surfactants ensure that more herbicide gets into the leaf, reducing the effect of these plant-borne cations.
- When water quality is not an issue, RectipHy still enhances herbicide efficacy by increasing the solubility of the herbicide, and lowering the spray tank pH thereby improving herbicide uptake by the plant.
- ATP has created a calculator to determine your water hardness called **Total Inactivation Potential** (refer to well water example in table below). Please visit www.atpag.com to input your Spray Water Analysis information to retrieve your Water Hardness report.

Weed Control

RectipHy Rate Calculator Example: Well Water

Ion	Activity Index	Spray Water Analysis ppm	Water Hardness (Inactivation Potential)
Potassium, K+	0.2	11.86	2.372
Sodium, Na+	0.6	436.81	262.09
Calcium, Ca++	1.0	191.52	191.52
Magnesium, Mg++	1.7	64.91	110.35
Iron, Fe+++	2.5	0.00	0.00
Total		705.10	
Total Inactivation Potential			566.325

Product Recommendations

- Apply RectipHy as a foliar spray with a recommended water volume that's flexible from 0.125% to 1.0% v/v providing a range of options to take on the toughest weeds and to meet your weed control objectives.
- Please contact your ATP Technical Account Manager for rate recommendations.
- To view the RectipHy SDS, Product Label and to use the RectipHy Water Hardness Calculator, please visit www.atpag.com

Classification	Water Hardness	RectipHy Use Rate
Soft	100 - 300 ppm	0.25 % v/v (1.6 oz/5 gpa of water)
Moderately Hard	300-750 ppm	0.5% v/v (3.2 oz/5 gpa of water)
Hard	750 - 1000 ppm	0.75% v/v (4.8 oz/5 gpa of water)
Extremely Hard	1000+ ppm	1.00% v/v (6.4 oz/5 gpa of water)

At ATP, we believe a proactive, science-based approach to restore the balance between plant and soil health is the single most effective way to deliver the genetic potential of the crop. We challenge the status quo by utilizing agtech to monitor and drive productivity.
